Post-Doctoral Fellowship in Mild Traumatic Brain Injury Research

The University of the British Columbia’s Faculty of Medicine (Division of Physical Medicine and Rehabilitation) is seeking qualified candidates for a research-focused post-doctoral fellowship, with specialization in mild traumatic brain injury (MTBI). The fellow will spend the majority of their time on a grant-funded randomized controlled trial, in which they will conduct brief neuropsychological assessments and provide psychological treatment to patients with MTBI. Participation in other MTBI-related research studies will be encouraged. Additional clinical training in adult neuropsychology (up to 20% effort) within the Vancouver Coastal Health system may be available, depending on the fellow’s interest. This might include exposure to dementia, stroke, and other neurological conditions.

The start date is flexible between late 2018 and early 2019. The salary for the first year will be $48,958 plus benefits (http://www.hr.ubc.ca/benefits/employee-groups/pdf-employee/). A two-year term is expected. The primary work location will be GF Strong Rehab Centre (4255 Laurel St) in central Vancouver, British Columbia, Canada.

Candidates should hold a PhD in clinical psychology or neuropsychology. Training and supervised practice with both neuropsychological assessments and psychotherapy (cognitive-behavioural therapy, exposure therapy, and/or mindfulness-based therapies) is a requirement. Prior experience working with patients with MTBI is an asset.

Interested applicants should submit a cover letter, vita, and list of three referees to: Dr. Noah Silverberg, PhD, ABPP-CN at tasha.klotz@ubc.ca. Specific questions about the position can be directed to noah.silverberg@vch.ca. We expect to offer interviews by videoconference.
